boundary

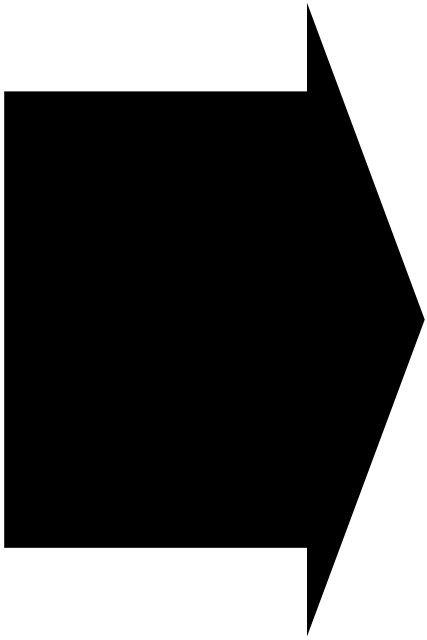

promotes autonomy

favours migration to MSA

improves adherence to business

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One of the ways to meet this demand is to increase the efficiency of food production. This can be done by using better farming techniques and by using more resources.

Another way to meet this demand is to reduce the amount of food that is wasted. This can be done by using food more efficiently and by reducing the amount of food that is thrown away.

There are many ways to meet the world's growing demand for food and other resources. It is up to us to decide which way is the best.

One of the most important things we can do is to use resources more efficiently. This will help us to meet the world's growing demand for food and other resources.

Another important thing we can do is to reduce the amount of food that is wasted. This will help us to meet the world's growing demand for food and other resources.

- 1996). The authors also found that the frequency of use of the Internet was positively related to the frequency of use of the telephone, and that the frequency of use of the Internet was negatively related to the frequency of use of the newspaper. These findings suggest that the Internet is becoming an important source of information for many people, and that it is being used in a way that is similar to the way in which the telephone and newspaper are used.
